Logic has become the most popular image slider availble on the web today. What started as a side project quickly became a huge success, celebrating over 1 million downloads in its first year. In addition to the jQuery plugin a WordPress plugin has further boosted the success of the slider, making the Nivo Slider one of the biggest premium plugins in the WordPress

premium plugin market at the moment. Lorem ipsum.

Minimalism Web App Sellwire is a new web app born out of

a lack of good options for selling digi-tal goods online. Sellwire aims to make selling digital goods as simple as possible, literally upload a file and share a link, and takes care of the complex e-commerce payment gateways and tracking stuff so that users can focus on making great products. Now out of beta, Sellwire continues to grow and hopes to become a prominent competitor in the ecommerce market.

Lightdesign WordPress Plugin Often before you launch a site you want to get some real users in to test

the site without allowing access to the rest of the world, normally known as "closed beta" testing. This plugin was built for startups who want to turn their WordPress site into a closed beta site without touching any code. Closed Beta is a powerful plugin with a built in user approval system and splash page customiser.

Showcase is a premium WordPress plugin and was created out of a frustration at the lack of good gallery

WordPress Plugins

functionality/plugins for WordPress at the moment. Showcase aims to redefine the "gallery" in WordPress by making the whole process of uploading, ordering and editing your images as simple as it can be. Then it makes your gallery look stunning by automatically showing your gallery in a beautiful lightbox slideshow. Not to mention built-in features like dynamic image resizing and simple lightbox theme changing.

Interactivity Web App

matic updates for their themes & plugins. WP Updates provides a simple interface for managing versions of themes/plugins without having to touch any code. Again this was an app built on top of processes and workflows that we already had created internally at Dev7studios and decided we should share it with the world.
